

I have recently started using XM Satellite Radio and find it not only progressive, but incredibly useful with regard to traffic and weather for local areas since I enjoy travelling by car. In fact, I found it very valuable during my trip to Orlando, Florida and look forward to using it to negotiate other cities. In addition, I live in a rural part of North Carolina, where radio reception is both spotty and unreliable. XM allows me to have excellent programming everywhere I go. I strongly urge the FCC to reject the petition 04-160 not only because of the weather and traffic issue, but further because this would only be the beginning of the NAB's attempts to limit the ability of PAYING customers to have the widest possibility of choices and would certainly hamper an already fragile economic recover. XM creates jobs! I respectfully request your serious and careful condideration in this matter. Thank you, Celso Alejo
